Sequence 2829, Application US/09864761
Patent No. US20020048763A1
GENERAL INFORMATION:
APPLICANT: Pank, David R.
APPLICANT: Rank, David R.
APPLICANT: Chen, Wensheng
TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID PROBES USEFUL FOR TITLE OF INVENTION: GENE EXPRESSION ANALYSIS BY MICROARRAY
FILE REFERENCE: According 2.1
                                                         US-09-864-761-2829
Sequence 31, Application US/10002600
Publication No. US2002013707A1
APPLICANT: Hopkins, Christopher M.
APPLICANT: Peterson, David P.
APPLICANT: Peterson, David P.
APPLICANT: Hawkins, Phillip R.
TITLE OF INVENTION: GERES REGULATED IN ACTIVATED T CELLS
FILE REPERENCE: PA-0042 US
CURRENT APPLICATION NUMBER: US/10/002,600
CURRENT APPLICATION NUMBER: 60/243,521
PRIOR FILING DATE: 2000-10-25

                                                                                                                                                                                 Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 88 Row: a Column: 20
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 28416422.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             155
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               468. .632

// note="SH3; Region: SH3 domain. SH3 (Src homology 3)
domains are often indicative of a protein involved in
signal transduction related to cytoskeletal organization.
First described in the Src cytoplasmic tyrosine kinase.

On Aug 7, 2000 this sequence version replaced gi:6425549.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission;

corresponding to the overlapping clone, as we submit sequences with

The following abbreviations are used to associate primary accession

numbers given in the feature table with their source databases:

Em:, EMBL; Sw., SWISSPROT; Tr:, TREMBL; Wp., WORNPEP; Information

on the WORNPEP database can be found at

thtp://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence

was generated from part of bacterial clone contigs of human

chromosome 20, constructed by the Sanger Centre Chromosome 20

the true right end of clone RP3-460AB is at 66741 in this sequence.

The true right end of clone RP3-460AB is at 5041 in this sequence.

The true right end of clone RP3-460AB is at 500 in this sequence.

The true right end of clone RP3-460AB is at 500 in this sequence.

The true right end of clone RP3-460AB is at 500 in this sequence.

The true right end of clone RP3-460AB is at 500 in this sequence.

The true right end of clone RP3-460AB is at 500 in this sequence.

The true right was made to resolve all sequencing problems, such as compressions and repeate, all regions were ceither double-stranded or sequence was finished as follows were covered by the quality data (i.e., phred quality versemble was confirmed by the group of pieter de Jong Por
                                                                                                                                                        Human DNA sequence from clone RP3-460d8 on chromosome 20q11.21-11.23 Contains the 3' end of the gene for a novel protein similar to N-myc downstream regulated (NDRG1) the 5' end of a gene encoding a novel protein tyrosine kinase, ESTS, STSs and GSSs, ALO31662
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi, Mammalia; Eutheria, Primates, Catarrhini, Hominidae, Homo.
